KIRAN V

AI/ML Engineer | Data Scientist | Full-Stack Developer

kirannhce@gmail.com | LinkedIn | GitHub | Portfolio | +91 6362929120

SUMMARY

AI/ML Engineer and Full-Stack Developer with 1 year of production experience building machine learning pipelines, computer vision models, and full-stack web applications. Achieved >90% accuracy on image classification tasks and resolved 150+ production issues at a clinical software company. Proficient in Python, TensorFlow, Scikit-learn, React.js, Node.js, and SQL. Focused on building intelligent systems that integrate ML models with production-grade web interfaces.

SKILLS

AI / ML: Python, TensorFlow, Keras, Scikit-learn, NumPy, Pandas, Matplotlib, Seaborn, LangChain, RAG

Backend: Java, Node.js, FastAPI, REST APIs, SQL, MongoDB, Linux, Docker

Frontend: React.js, JavaScript, TypeScript, HTML, CSS, Vite

Cloud & Tools: AWS, Git, CI/CD (GitHub Actions), GitHub Copilot, Jira, Confluence, Agile/Scrum

EXPERIENCE

Software Engineer I, Advarra March 2025 – Present

- Resolved 150+ production tickets across 6 release cycles, sustaining a <2% regression rate and zero critical defects in production.
- Patched 4 classes of security vulnerabilities (SSRF, XXE, Regex & SQL Injection) in a regulated clinical platform, protecting 100,000+ patient records from attack surface exposure.
- Cut page load time by 40% by migrating a legacy JavaScript freezePanes dependency to native CSS, removing unwanted code throughout the application
- Developed and shipped full stack features for an enterprise Clinical Trial Management System (OnCore) using Java, Python, React.js, Node.js, SQL, and Docker across 5 production releases.
- Decreased feature implementation time by 30% through GitHub Copilot integration, code reviews reduced pre-release defects by 65% across sprint cycles.
- Acted as a key liaison between engineering and stakeholders, translating product requirements into technical specifications and ensuring clear communication across sprint cycles to keep deliverables meet with business requirements.

PROJECTS

Algorithmic ForexBot — AI Forex Trading Dashboard — *React, Vite, Node.js, Vercel Serverless, Groq LLM API* Live Demo · GitHub

- Created a Forex analytics dashboard with a custom SVG chart engine (no charting libraries) rendering live OHLCV candlestick data with sub-100ms updates across 6 currency pairs.
- Designed a signal-scoring engine combining 5 technical indicators (RSI, MACD crossover, Bollinger Bands, Moving Average cross, momentum) to generate ranked BUY/SELL/HOLD signals with confidence percentages.
- Implemented 8 candlestick pattern detectors (Hammer, Doji, Engulfing, Morning/Evening Star) using pure algorithmic logic without third-party dependencies.
- Integrated Groq Llama 3.1 70B via a Vercel serverless proxy keeping API keys server-side to return structured trade recommendations: entry price, stop-loss, take-profit, and risk/reward ratio.
- Deployed via GitHub Actions CI/CD to Vercel with dark mode support and a fully responsive layout.

Plant Disease Detection — CNN Image Classifier — *Python, TensorFlow, Keras, NumPy, Matplotlib* GitHub

- Trained a CNN to classify 3 plant leaf disease categories (Early Blight, Late Blight, Healthy), achieving 92% validation accuracy on an agricultural image dataset.
- Developed image preprocessing pipeline resize, normalize, and augment (horizontal flip, rotation, zoom) reducing overfitting and improving cross validation performance by 8%.
- Tuned model training with Adam optimizer and categorical cross-entropy loss; produced a confusion matrix and per-class precision/recall report to quantify classification errors.

EDUCATION

B.E. in Computer Science & Engineering · New Horizon College of Engineering, Bengaluru 2025

CERTIFICATIONS

Data Science using Python

Data Analytics using SQL & Excel

Amazon Web Services (AWS)

Introduction to Computational Intelligence
