

KIRAN V

Software Engineer | Full Stack Developer | Backend & Security

kiranhnce@gmail.com | +91 6362929120 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Bengaluru, Karnataka, India

PROFESSIONAL SUMMARY

Software Engineer with 1.3+ years building and securing enterprise-scale clinical-trial management systems serving **1,000+ research sites** and **100,000+ patient records**. Shipped full-stack features and resolved **150+ production defects** across Java EE, Spring Boot, REST APIs, React.js, and SQL in FDA/HIPAA-regulated environments. Remediated critical security vulnerabilities (SQLi, SSRF, XXE, ReDoS) and reduced frontend load times by **20%**. Seeking backend, full-stack, or AI/ML-adjacent engineering roles at product-driven companies.

WORK EXPERIENCE

Software Engineer I | [Advarra](#)

March 2025 – May 2026

- Engineered 15+ full-stack features across 6 Agile release cycles—including form validations, duplicate-record enforcement, and UI component fixes—using Java EE, Spring Boot, JSP, REST APIs, and JavaScript, in collaboration with QA engineers and product owners, reducing QA-reported regressions by ~30%.
- Eliminated 150+ high-priority production issues by conducting root-cause analysis, debugging data integrity problems, and validating fixes across enterprise clinical-trial workflows.
- Remediated 4 critical security vulnerability classes (SQL Injection, SSRF, XXE, Regex DoS) across enterprise platform modules—independently scoping, patching, and validating each fix—closing audit findings and hardening compliance posture for 1,000+ enterprise clients.
- Boosted frontend performance 20% on high-traffic platform screens by replacing a legacy third-party JavaScript dependency with a native CSS implementation, cutting average page-load time and eliminating a third-party supply-chain risk.
- Optimized SQL query execution for large-scale datasets by profiling slow queries, redesigning indexes, and validating execution plans, reducing average query latency by ~35% and relieving load on production database clusters serving 100,000+ records.
- Reduced average pull-request turnaround time by ~25% through adoption of AI-assisted development tools (GitHub Copilot, Claude), accelerating debugging, code reviews, and sprint delivery across a 6-member engineering team.

PERSONAL PROJECTS

National Identification Management System [[GitHub](#)]

- Engineered a desktop-based identity management application to maintain citizen demographic and identification records through a centralized database system.
- Developed database-driven CRUD operations using Java, JDBC, and MySQL, enabling efficient record storage, retrieval, modification, and validation.
- Designed a responsive Java Swing interface with robust input validation and search functionality, improving usability and data accuracy.
- Leveraged Object-Oriented Design principles to build modular, maintainable components and reduce code duplication across application workflows.
- Integrated SQL-based persistence and optimized database interactions to ensure reliable and scalable record management.

ClaimSight — Agentic FNOL Insurance Claims Processor [\[Live\]](#)

- Architected a multi-step agentic LLM pipeline using LangChain and LLaMA 3.1 (via Groq API) that extracts structured fields from unstructured insurance claim documents, validates data integrity, and auto-routes claims—reducing manual processing steps by ~60% in end-to-end demos.
- Deployed full application on Render with a Flask REST backend; designed prompt chains with fallback logic handling malformed inputs and edge-case document formats.

Agent-First Transcription API — Async Multi-Stage Audio Pipeline [\[GitHub\]](#)

- **Built** an async transcription pipeline using FastAPI and OpenAI Whisper with multi-provider fallback (Google Chirp 3), speaker diarization, and Gemini-powered AI summaries, reducing end-to-end transcription latency by ~40% vs. synchronous baselines.
- **Integrated** Model Context Protocol (MCP) to expose transcription tools as callable agent actions, enabling LLM-driven orchestration of the full audio-to-summary workflow.

EDUCATION

B.E. in Computer Science & Engineering

2021 – 2025

New Horizon College of Engineering, Bengaluru | CGPA: 8.78

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, SQL

Backend & APIs: Spring Boot, Node.js, REST APIs, JDBC, Java EE

Frontend: React.js, HTML, CSS, Vite

Databases: MySQL, PostgreSQL, MongoDB

DevOps, Cloud & Tools: Git & GitHub, GitHub Actions (CI/CD), Linux, Docker, AWS (EC2, S3, RDS, IAM)
