Kiran V

Software Engineer | AI / ML | Data Science | kirannhce@gmail.com | LinkedIn| GitHub

---

SUMMARY

Machine Learning-focused Software Engineer with experience building scalable enterprise applications and AI-driven solutions using Python, Java, and React. Delivered 50+ production fixes and features at Advarra while improving system performance and security. Skilled in developing machine learning models, data pipelines, and predictive systems using TensorFlow and Scikit-learn.

PROFESSIONAL EXPERIENCE

Software Engineer I – Advarra India
Mar 2025 – Present

- Resolved and delivered 150+ Jira tickets (bugs, enhancements, investigations), contributing to 5+ production releases and reducing backlog by 30%
- Refactored legacy UI logic by replacing freezePanes.js with CSS position: sticky, reducing UI rendering issues by 40% and improving page load responsiveness
- Identified and reported 10+ security vulnerabilities (SSRF, regex injection, input validation), leading to 100% resolution before production release
- Developed and enhanced 8+ core application features using Java, React, Node.js, SQL, and Docker
- Conducted 20+ code reviews per sprint, reducing production defects by 25% and improving code quality
- Collaborated with 5+ cross-functional team members in Agile sprints, ensuring 95% on-time delivery of features
- Leveraged AI tools (GitHub Copilot, ChatGPT, OpenCode AI, Claude AI) to reduce development time by 20% and speed up debugging

---

PROJECTS

Plant Disease Classification using CNN

- Developed a CNN-based image classification model on 5,000+ plant leaf images to detect Early Blight, Late Blight, and Healthy classes
- Implemented preprocessing pipeline (resizing, normalization, augmentation) on 5,000+ images, improving model generalization and reducing overfitting by 15%
- Optimized training using Adam optimizer, reducing convergence time by 20% and lowering training epochs from 50 to 35

Stock Price Prediction using Machine Learning

- Built a Random Forest regression model using **10,000+ historical stock records**, improving prediction reliability
- Processed and engineered **15+ features** from time series data using Pandas, improving model input quality

---

SKILLS

Programming: Python, Java, JavaScript, SQL
Machine Learning: Scikit-learn, TensorFlow, NumPy, Pandas
ML Concepts: Regression, Classification, Model Evaluation (F1-score, RMSE, MAE)
Web Development: React.js, Node.js, HTML, CSS
Backend & Databases: REST APIs, SQL Databases
Tools: Git, Docker, Jira, Confluence
AI Tools: GitHub Copilot, ChatGPT, Claude AI, OpenCode AI

EDUCATION

Bachelor of Engineering in Computer Science
New Horizon College of Engineering, Bengaluru — 2025

CERTIFICATIONS

- Data Science using Python
- Data Analytics using SQL & Excel
- Cloud Computing - AWS
- Introduction to Computational Intelligence
