Kiran V

SOFTWARE ENGINEER · FULL-STACK AI ENGINEER **OPEN TO WORK**

kiran.ai.fullstack@gmail.com · +91 6362929120 · LinkedIn · GitHub · Portfolio

PROFILE

Full-stack engineer with 1.5+ years of experience shipping production software across Generative AI, full-stack development, and data engineering. Formerly the day-to-day engineer on **DepoIQ**, an AI-powered legal-tech SaaS platform that extracts, analyzes, and cross-references depositions, medical records, and billing documents for litigation teams with hands-on ownership from design through production monitoring across a FastAPI/SQLAlchemy/pgvector backend and a Next.js/React frontend, delivering tenant-aware document branding, case-wide timeline consolidation, and production performance fixes validated against a 2,700+ test suite. Independently engineered 4 additional production-ready AI applications: a multi-agent FNOL claims processor, an async transcription API with MCP support, a financial portfolio optimizer, and a full-stack file conversion platform.

EXPERIENCE

Full-Stack AI Engineer — Cellstrat *(Client: DepoIQ)*

July 2026 - October 2026

- Own full-stack delivery on DepoIQ end to end — from design and implementation through test coverage and production monitoring — across a FastAPI/SQLAlchemy/pgvector backend and a Next.js/React frontend.
- Shipped a tenant-aware branding system for PDF/XLSX medical, billing, and deposition export reports, rendering either of two distinct brand identities per client tenant with zero regressions to existing output, backed by 220+ dedicated unit tests.
- Bridged per-record timeline data into a unified case-wide Timeline view and restructured deposition tab navigation, shipping the change across the full stack from schema to UI.
- Diagnosed a production latency bottleneck to a per-request cloud-storage auth handshake blocking the async event loop across 16+ call sites; redesigned it as a cached singleton service, verified against 2,700+ backend tests.
- Added server-side pagination to case-level Timeline and Records views to prevent unbounded query growth as litigation case size scales, protecting API latency ahead of production impact.
- Practice strict test-driven development — spec, plan, implementation, review — on every feature, keeping a 2,700+ test backend suite fully passing with static type and lint checks on all changes.

Software Engineer I — Advarra, Inc.

Mar 2025 – May 2026

- Diagnosed and resolved 150+ production defects and security vulnerabilities across 6 release cycles, sustaining a <2% regression rate and zero critical escapes for a clinical trial SaaS platform serving 1,000+ research sites.
- Architected Halo, an LLM-powered sprint management tool integrating with JIRA, adopted company-wide by 150+ engineers, saving 5+ hours of manual reporting per team per sprint.
- Remediated 4 critical vulnerabilities (SSRF, XXE, Regex DoS, SQL Injection), protecting 100,000+ patient records under FDA 21 CFR Part 11 and HIPAA compliance.
- Improved frontend load performance by 40% and SQL query execution by ~30% via multi-column indexing across 1M+ record datasets.

PROJECTS

ClaimSight (live)

Python · Flask · LLaMA 3.1 · Groq API · LangChain

Agentic FNOL insurance claims processor — extracts fields from unstructured documents, validates data, and auto-routes claims using multi-step LLM reasoning.

Agent-First Transcription API (GitHub)

Python · FastAPI · Whisper · Chirp 3 · Gemini · MCP

Async multi-stage transcription pipeline with speaker diarization, AI summaries in under 30 seconds, and MCP support for agent-stack integration.

TECHNICAL SKILLS

ML & Data:	Machine Learning · Scikit-Learn · Pandas · NumPy · Data Science · SQL · Vector Databases (pgvector)
Backend:	Python · Node.js · FastAPI · Flask · SQLAlchemy (async) · Pydantic · REST APIs
Frontend:	React.js · Next.js · JavaScript · TypeScript · HTML/CSS
Generative AI:	LangChain · RAG · Prompt Engineering · Agentic AI · LLMs · NLP · Groq API
Infra & Cloud:	Docker · AWS · GCP (Cloud Run, Cloud SQL, Cloud Tasks) · GitHub Actions · CI/CD · Git · Linux · JIRA

EDUCATION

B.E., Computer Science & Engineering

New Horizon College of Engineering, Bengaluru · 2021 – 2025

CERTIFICATIONS

Data Structures & Algorithms · AWS · Relational Databases 101 · Enterprise Design Thinking · LangChain – Python
