

KIRAN V

Software Engineer | Full Stack Developer | Backend & Security

kiranhnce@gmail.com | +91 6362929120 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Bengaluru, Karnataka, India

PROFESSIONAL SUMMARY

Software Engineer with 1.3 Years hands-on experience building and maintaining enterprise scale Clinical Trial Management Systems at **Advarra**. Experienced in troubleshooting production issues, improving platform stability, writing secure backend code, and developing full-stack applications using Java, Spring Boot, Java EE, React.js, Node.js, SQL, and Linux based workflows. Worked on resolving production defects, security vulnerabilities, REST APIs, database optimisation, and Agile release cycles in FDA and HIPAA-compliant environments. Familiar with Git workflows, CI/CD pipelines, debugging, cloud platforms, containers, and AI assisted developer tools. Strong analytical, problem-solving, and collaboration skills with a passion for open-source technologies and scalable systems.

WORK EXPERIENCE

Software Engineer I | Advarra

March 2025 – May 2026

Enterprise-grade Clinical Trial Management System (OnCore CTMS) serving 1,000+ research sites and 100,000+ patient records globally, operating under FDA and HIPAA compliance requirements.

- Investigated, triaged, and resolved **150+ production defects, enhancement requests, and stability issues** across 6 release cycles in Java EE and JSP-based CTMS modules — including Reviews, Subjects, Protocols, Specimen Management, and Reporting.
- Remediated **4 classes of critical security vulnerabilities** — SQL Injection, SSRF, XXE, and Regex DoS — across enterprise CTMS modules handling sensitive clinical-trial workflows, improving platform compliance posture under FDA and HIPAA standards.
- Diagnosed and resolved complex **database consistency issues** by reproducing multi-step workflows locally, validating records directly against SQL tables, and confirming fixes across staging and test environments.
- Delivered full-stack feature enhancements using **Java, Spring Boot, Java EE, JSP, SQL, JavaScript, and REST APIs**, including date validations, duplicate identifier checks, and character-counter behaviour corrections for clinical review screens.
- Improved frontend performance by **~20%** by removing a legacy JavaScript dependency and replacing it with a native CSS solution, reducing page load times across high-traffic clinical screens.
- Optimized **SQL queries and indexing strategies** for large-scale clinical datasets, improving query execution efficiency and reducing load on production database workflows.
- Participated in full **Agile/Scrum delivery cycles** — sprint planning, code reviews, pull requests, developer testing, release validation, and technical documentation — in close collaboration with QA engineers and product owners.
- Leveraged **AI assisted developer tools** to accelerate debugging, code review cycles, and iterative development workflows.

EDUCATION

B.E. in Computer Science & Engineering

2021 – 2025

New Horizon College of Engineering, Bengaluru | CGPA: 8.78

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, SQL

Backend & APIs: Spring Boot, Node.js, REST APIs, JDBC, Java EE

Frontend: React.js, HTML, CSS, Vite

Databases: MySQL, PostgreSQL, MongoDB

DevOps, Cloud & Tools: Git & GitHub, GitHub Actions (CI/CD), Linux, Docker, AWS (EC2, S3, RDS, IAM), JIRA
